We recognize restrictions that hedge language "propaganda activities which might either disrupt public order or seriously affect the rights of others" are likely to render reciprocal limitations in this field unacceptable to Soviets. This language therefore might induce Soviets to drop insistence on provisions on "subversive activity" in any agreement on Berlin. However, we feel above language implies ~~common Western-Soviet criteria~~ of what disturbs public order in both parts of Berlin. Consider it desirable to use language which avoids this implication and which points up clearly western concept of "subversive activity."

Principal UNGA resolutions already adopted on inflammatory propaganda and indirect aggression to some extent meet this objective. There would be added merit to using UN language if UN monitoring role is feature of our proposal. Synthesis of applicable UNGA phrases, which we recommend as substitute is, QUOTE activities aimed at impairing the freedom, independence or integrity of a people, at inciting civil strife or aggression, or at the subversion or violent overthrow of lawful governments UNQUOTE.
